1. This office action is in response to the amendments received on 04/30/2010.

EXAMINER'S AMENDMENT

2. Examiner has made multiple attempts to contact the Applicant's representative (Mr. Qingyu Yin), but, to this date no response has been received.
3. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Allowable Subject Matter

4. Claims 1-4, 6, 7, 9-20, 23-25 and 27-30 are allowed.
5. As to claims 1-4, 6, 7, 9, and 10, a comprehensive search of prior art of record failed to teach either alone or in combination a process for synchronizing a clock signal to a data stream, comprising the steps of: generating a reference signal; identifying a packet in the data stream as a token packet according to a universal serial bus (USB) protocol by comparing a plurality of intervals in a wave representing bit value changes in the packet; generating a digital value equal to a number of cycles of the reference signal in a time duration covering a predetermined number of bit periods in the token packet in the data stream; and generating a clock signal synchronized with the data stream by

Art Unit: 2611

calculating a number of cycles of the reference signal in a bit period of the data stream from the digital value and the predetermined number.

6. As to claims 11-20, 23-25 and 27-30, a comprehensive search of prior art of record failed to teach either alone or in combination a method/apparatus for synchronizing a clock signal to a data stream by generating a reference signal; generating a digital value equal to a number of cycles of the reference signal in a time duration covering a predetermined number of bit periods in a packet in the data stream; and generating a clock signal synchronized with the data stream by calculating a number of cycles of the reference signal in a bit period of the data stream from the digital value and the predetermined number, wherein the step of generating a clock signal includes the steps of: setting a count to zero; detecting a change in a bit value in the data stream; in response to a change in the bit value: generating a first edge for a cycle of the clock signal; and setting the count to zero; in response to no change in the bit value: increasing the count by one; in response to the count being equal to the digital value, setting the count to zero; in response to the count being equal to an odd multiple of the digital value divided by two times of the predetermined number, generating a second edge for the cycle of the clock signal; and in response to the count being equal to a multiple of the digital value divided by the predetermined number, generating a third edge for the cycle of the clock signal; and returning to the step of detecting a change in a bit value.
